About the Dashboard

The Macro and Markets Dashboard for the United States contains more than 100 indicators of the performance of the U.S. economy. The dashboard includes twelve categories of charts, and a table of exchange rates.

Dashboard plots follow a uniform design. The line plots show trends over the past decade, while the horizontal bar plots decompose recent developments. The latest value and its reference period are listed in the bottom left corner of the plot area for line plots. Below each plot is a brief listing of the source with a link (in blue) to the source data.

Chart of the week

Source: FRED: Table 5.3.6. Real Private Fixed Investment by Type, Chained Dollars

While quarterly GDP growth slowed from 3.5% in Q3 to 1.9% in the BEA's advance estimate for 2016 Q4, business investment rebounded. For 2016 as a whole, business investment growth was non-existent, a result of weak earnings growth in some sectors (e.g. mining, energy) and a general corporate preference for returning profits directly to shareholders through buybacks and dividends. By investment type, aggregate equipment investment, shown above in light blue, critically increased in Q4 over its Q3 level, but remains below its 2015 level. In 2017, tax and trade policies, input prices, and consumption behavior will affect corporate profits, which, combined with the cost of capital and perceived future business prospects, will determine investment.

High-frequency indicators

Macroeconomic Indicators: Overview

Components of real gross domestic product (GDP)

FRED: GDPC1; GCEC1; GPDIC1; NETEXC; PCECC96

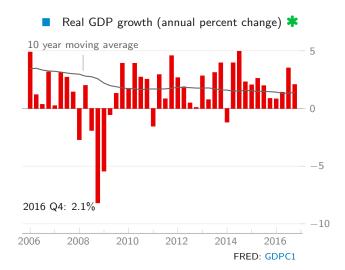

Gross domestic investment (GDI)

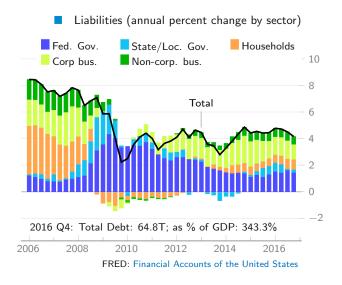

FRED: Saving and Investment by Sector

Retail sales excluding food (annual percent change) *
